PROJECTS

Context Aware Retrieval Augmented Generation (CA-RAG) [Project Link]

(Academic Project / Hackathon)

- Developed a Context Aware RAG system using FastAPI that answers user queries from uploaded PDFs with similarity validation to handle context inconsistencies in LLMs.
- Implemented adaptive chunking, query rewriting, semantic similarity based retrieval (FAISS), and hallucination detection to improve response accuracy.
- Integrated LLM (Ollama / OpenAI) for answer generation with source citation generation and confidence scoring.
- Used MongoDB for storing documents, user data and feedback, and implemented JWT based authentication with bcrypt for secure access.
- Built a full stack application with React frontend and REST APIs, and containerized the project using Docker for easy deployment.
